## Environmental measures during the health crisis

### Waste: Used gloves and masks
- Always put used gloves and masks in the general waste bins, never in the yellow bins. We recommend approved and reusable face masks to minimise waste. Follow the manufacturer’s instructions on how to use and wash the mask properly.

### Drinks
- **Bring your own bottle or drinking vessel.**
- Only refill bottles at authorised locations.
- **Use reusable containers:** Try to use reusable containers to minimise waste production. Avoid using disposable bottles.

### Sustainable mobility
- **By getting around the city in an active way you will not only help the planet, but also contribute to your own physical and mental well-being.**
- Make the most of the city’s bike lanes or travel on foot to class or work on foot, always adhering to physical distancing measures. If using public or shared transport, don’t forget to put your mask on properly, maintain physical distancing, and sanitise your hands before entering and upon exiting the vehicle.
